(Marks 10)

PASSAGE- I

To avoid the various foolish opinions to which mankind is prone, no superhuman brain is required. A few simple rules will keep you free, not from all errors, but from silly errors. If the matter is one that can be settled by observation, make the observation yourself. Aristotle could have avoided the mistake of thinking that women have fewer teeth than men, by the simple device of asking Mrs. Aristotle to keep her mouth open while he counted. Thinking that you know when, in fact, you do not is a bad mistake, to which we are all prone. I believe myself that hedgehogs eat black beetles, because I have been told that they do; but if I was writing a book on the habits of hedgehogs, I should not commit myself until I had seen one enjoying this diet. Aristotle, however, was less cautious. Ancient and medieval writers knew all about ancient unicorns and salamanders; not one of them thought it necessary to avoid dogmatic statements about them because he had never seen one of them.

- The author portrays mankind as :-
 - very intelligent
 - having superhuman qualities
 - nervous and weak
 - by and large lazy and ignorant**
- The author is in favour of drawing conclusions on the basis of :-

 - existed in the past but now have become extinct
 - never really existed**
